

## INSIGHTS AND SUGGESTIONS (IDEA/ADVICE) :-

### 1. Order Volume by Status

*There is a relatively balanced distribution among order statuses, but the number of pending orders is slightly higher than delivered or shipped ones, which might indicate processing delays.*

➔ *Reduce Order Processing Time , Investigate Bottlenecks in Pending Orders*

### 2. Sales Revenue by Order Status

*Most revenue is being generated from delivered orders, as expected. However, the revenue from pending orders is also quite high, which indicates a large portion of sales is yet to be fulfilled.*

➔ *Prioritize High-Value Pending Orders*

### 3. Monthly revenue trend

*Monthly revenue ranges from about ₹47,000 to ₹62,000+ , There's consistency in revenue, but no steep growth spikes — indicating relatively stable but flat performance.*

➔ *Prioritize high-value shipped orders , Investigate Pending Orders*

### 4. Average order value by status

*Shipped orders have the highest value at ₹255.62. **Pending** orders have the lowest average value at ₹252.20.*

➔ *Discount and offers to repeated customers (Reward) , Analyze the reason of customers who didn't come back a second time.*

### 5. Repeat vs. one-time customers

*60% of customers (4402 out of 7334) are repeat customers. 40% are one-time buyers, which is still a significant portion. This implies that Alt Mobility has decent retention but there's ample opportunity to improve customer loyalty and increase LTV (lifetime value).*

➔ *Launch a Loyalty Program , Analyze Churn Reason*

## 6. Top 5 customers by total spend

*The top customer (ID: 6477) spent ~₹2800, which is ~25% higher than the next top spender. The top 5 customers spent a combined total of ~₹11,624, indicating that a small portion of customers contributes a large portion of revenue — classic Pareto (80/20) principle.*

➔ *VIP Tier or Premium Benefits , Predictive Targeting*

## 7. Payment Status

*Only ~33% of payments are completed. This is extremely low and alarming. Combined failed and pending payments = 10,009, which suggests potential issues in the checkout process, technical reliability, or user friction.*

➔ *Improve Payment Gateway Reliability*
